

Diaphragm and Solenoid Valves

Using the proper valves is vital for the correct operation of your Mikro-Pulsaire® collector. Call 800-892-7278 to speak to our experienced parts specialists.

Diaphragm Valves

Designed exclusively for the Mikro-Pulsaire line of dust collectors, these valves are an essential part of the cleaning mechanism. Manufactured to rigid specifications, they are available in the following pipe sizes: ¾", 1", 1 ¼", and 1 ½". The 1" and 1 ½" sizes are shipped complete with gasket, washer, and coupling.

MikroPul maintains all sizes in stock, though we recommend that you keep sufficient stock on hand for immediate replacement should a failure occur.

Repair kits for all size diaphragm valves are also available from stock, complete with instructions for rebuilding a valve.

Solenoid Valves

Fast opening, long life, and high flow are the hallmarks of these valves. Ruggedly constructed of brass, our solenoid valves do not require a minimum operating pressure. All valves are 2-way direct acting, and work on a normally opened or closed mode. They are available in ¼" or ⅜" NPT.

All solenoid valves are in stock ready for immediate shipment. We also stock a complete supply of repair kits, including installation instructions.

MikroPul stocks pulse system valves and repair kits for every Mikro-Pulsaire we make.

Specifications

Coil:	Continuous duty molded Class F.
Media:	Air and inert gas. Normal ambient temperature.
Ranges:	AC construction 32° F to 125° F (0 to 52° C).
Electrical:	110-120V, 60 HZ
Pressure:	125 psi (8.6 bar) max.

Solenoid Enclosures

MikroPul stocks a complete line of solenoid enclosures in aluminum and steel. These enclosures are available in either NEMA 4 or NEMA 7/9 explosion proof designs. The standard NEMA 4 enclosure contains 3 to 12 valves, and the NEMA 7/9 enclosure can accommodate 3 to 5 valves.
