

Drift Eliminators

Modular interlocking drift eliminators offer easy installation, self sealing design, and excellent droplet separation. The overlapping design makes installation fast and watertight. No caulking or weather stripping is needed between modules. Drift eliminator media may be cut to fit in the field; however, elements will not interlock with a field cut edge. The cut edge should be installed against the wall of the cooler module. They should be installed downstream of cooler media.

Drift Eliminator Sizes:

Lengths: 48", 60", 72" +/- 3/16"

Widths: 12-1/8", 25-1/8" +/- 3/16"

Depth: 5.25" +/- 3/16"
